## NEW CARBON FIBER BOOMSTICK™ BARREL

Introducing the all new Carbon Fiber Boomstick™. Players have always desired a barrel with stainless steel precision, but strive to keep their equipment as lightweight as possible. The new Carbon Fiber Boomstick™ now gives players the best of both worlds. Featuring a unique and proprietary stainless steel insert with a carbon fiber outer sleeve, the Carbon Fiber Boomstick™ brings barrel technology to a new level. The special blend of materials allows us to micro hone our barrels to a mirror finish while providing you with a lightweight barrel, lighter than our popular Ultralite Boomstick™.

The stainless steel insert is built from gun drilled surgical grade 303 stainless steel and aircraft grade carbon fiber. The inside bore is honed to a 6 micron surface finish, giving you the smoothest and straightest barrel surface on the market. Carbon fiber provides a high strength-to-weight ratio, and the density of carbon fiber is considerably less than that of stainless steel, making it ideal for this barrel application resulting in an extremely light and accurate barrel. Combined with DYE's trademark muzzle break design, the all new Carbon Fiber Boomstick™ is quiet, aesthetically appealing and will once

again set the standard of high performance in the barrel market.

The all new Carbon Fiber Boomstick™ undergoes a unique process of combining a stainless steel micro honed insert with that of the highly acclaimed carbon fiber material. This process allows us to provide you with the most accurate and lightweight barrel on the market today.

Other barrels on the market use carbon fiber, but not in the way that we do. The surface the paintball travels on is actually micro honed surgical grade 303 stainless steel, wrapped in carbon fiber. This stainless steel surface is the most accurate of all materials available. It allows us to hone the surface so perfectly, it is comparable to 1/3 of a human hair. Unlike other carbon fiber barrels on the market where the paintball actually travels against the weave of the carbon fiber, ultimately leading to its degradation and decrease in accuracy over time, the Carbon Fiber Boomstick™ barrel provides you with long-term accuracy and consistency.

With the all new Carbon Fiber Boomstick™ you will have stainless steel precision with extremely light weight performance. Truly, the Choice of Champions™.

*DYE Carbon Fiber Boomstick™ barrels are available in bore sizes .684, .688 and .692 and 15" and 17" lengths.*

## **BOOMSTICK™ BARRELS**

The DYE Ultralite™ Boomstick™ barrel is a popular favorite of today's top professionals. The Ultralite™ Boomstick™ is well known for its micro honed finish providing incredible accuracy. Additionally, the Ultralite Boomstick gets its name from 6061 aluminum light weight construction and two piece interchangeable design. DYE's trademark muzzle break design is quiet, aesthetically appealing and world famous in the barrel market. Many may look similar but they are not the original DYE Boomstick™. Precision quality shot after shot that you can expect from DYE as the leader in barrel manufacturing.

*Lengths: 14, 16, 18.*

*DYE tips are now available separately. We offer 14"-16" in: black, clear, red, blue, pink, olive, and camo (dusted). We offer 18" in black (dusted). DYE Ultralite™ backs are available separately in black, bore size .688 in the following threads: Spyder, Model 98, Impulse, A5. Cocker backs in bore sizes .684, .688, and .692 available in: black, clear, red, and blue. .695 bore size available in Cocker thread, black only.*

## **TITANIUM BARRELS**

The creation of the DYE Titanium Boomstick® has set a precedence in paintball that has yet to be surpassed. Born in the shadow of the Boomstick™ and bred of a new type of thinking towards paintball, the TI-Boomstick® is the only barrel in the world to utilize one of the most expensive and high-tech materials available to man - Titanium. Initially used in aerospace and military applications, titanium found its way to the mainstream and started being applied as after-market parts for expensive toys. Titanium is world renowned for its exceptional strength and extreme light weight. Titanium has the weight of aluminum, yet strength exceeding that of stainless steel. The only obstacle in working with this material is the difficulty involved in machining and honing. We have overcome this obstacle to make the truest and longest lasting barrel available.

*DYE Titanium backs are available in bore size .688, Cocker thread, polished clear only.*

**NEW 2010 NT** Introducing the 2010 DYE NT, a revolutionary technology break through in air usage efficiency, accuracy performance and stylish design. The NT is not only the most air efficient and accurate paintball gun Dye has ever produced, it is also the lightest and most compact in its category. Continuing with Dye's famous patented spool valve design, the new NT Boost Bolt design is the ultimate refinement of next generation spool valve technology. After several years in development, the NT sets a new performance standard for all high-end paintball markers to aspire. Simply put, the best just got better.

The Boost Bolt system is supported by a redesigned circuit board with faster processing providing more accurate ROF control. Comfort and stability is assured with the second generation Patented Ultralight grip frame design, providing improved trigger adjustment, new retained push button system, and a redesigned battery mounting system. This grip frame combination is easily accessed through a new first for the industry, full wrap-around, tool-less sticky grip design. Mounted to the bottom of the UL frame is the new UL airport that operates with a simple easy turn, low profile knob that allows forward placement for maximum comfort.

### **NT FEATURES**

Available in 4 colors and 4 patterns. Weight 1.6lbs.

#### **01 ULTRALITE BARREL**

The industry standard for accuracy, the NT comes stock with the Ultralite™ 14 inch barrel.

#### **02 NEXT GENERATION SPOOL VALVE**

The NT Boost Bolt is the culmination of over several years of design, research, and testing. A low mass bolt minimizing recoil is controlled by the most advanced spool valve design ever.

#### **03 BOOST FORWARD TECHNOLOGY**

The patent pending Boost Forward Technology controls the speed of the bolt through its cycle, providing a gentle push of the ball at the beginning to minimize ball breakage, and increased speed later to maximize efficiency and consistency.

#### **04 AUTOMATIC VALVE SHUTOFF**

The patent pending auto shutoff instantly cuts off the shot chamber as soon as enough air is released to fire the ball, ensuring no air is wasted.

#### **05 BOOST BOLTS LINEAR SECONDARY SOLENOID SPOOL**

The linear, second stage solenoid spool minimizes air usage and air travel allowing the NT to function with a dwell of only 6 milliseconds.

#### **06 LOW OPERATING PRESSURE**

The NT's standard operating pressure is a low 130psi, which results in minimal recoil and sound.

#### **07 DYE EYE PIPE SYSTEM WITH PRO-PERFORMANCE DETENTS**

New durable and super-flexible detents offer supreme tenderness to the most brittle of paint. New flex-spring geometry ensures that balls will not double feed into the breach.

#### **08 ULTIMATE EFFICIENCY**

Based off the industry standard 68ci /4500psi compressed air tank, the NT operating at 290 fps will generate 1500 to 1700 shots, depending on bolt configuration.

#### **09 PLAYER PERFORMANCE AND SHOOTING COMFORT**

By adjusting the bolt kit's shot chamber volume and air flow, the NT's efficiency, recoil, and sound signature can be modified to the users exact performance needs.

#### **10 ULTRALITE AIRPORT**

The UL airport has deep cuts that keeps it as light as possible, and gives it an aggressive look. It operates with a simple 1/4 turn low profile side knob that allows forward port output for maximum comfort and streamline looks.

#### **11 COLORED O-RINGS**

Makes it easy to perform regular, scheduled maintenance of your bolt system.

#### **12 ULTRALITE REACH TRIGGER**

Trigger roller bearing inserts give the trigger stability and a smooth swing return. The external adjustable design allows you to limit the travel of the trigger and adjust the reach, rake, and spring tension without removing the grip frame or Sticky Grip.

#### **13 2ND GENERATION ULTRALITE FRAME**

The newest revision of the now famous Ultralite frame offers an improved trigger adjustment system, redesigned battery mounting location, new button cover, and new control button housing system.

#### **14 LED CONTROL**

High intensity LED provides identification to program functions.

#### **15 METAL POWER BUTTONS**

Our metal/rubber button pad features large buttons that can easily be used while wearing gloves. Stainless steel buttons are guaranteed not to fail.

#### **16 HYPER3™**

The Hyper3™ regulator sports a streamlined diameter with unmatched flow and consistency, while maintaining precise adjustments.

#### **17 CAM LOCK FEED NECK**

Low profile locking feed port with adjustable cam lock neck allows you to use your choice of hopper and secure it firmly to the NT without the use of tools

#### **18 TOOL-LESS STICKY GRIP™ & CONTACT PADS**

The full wrap around NT Sticky Grip allows you to easily access the battery and circuit board for programming with no tools. We've also added a front rubber contact pad and rear rubber contact grip, for maximum comfort and stability

#### **19 NT PROGRAMMING**

The all-new circuit board for the NT has faster processing, and more accurate ROF control.

*DYE Precision, Inc. U.S. AND INT'L PATENTS PENDING.*

*Covered by one or more of the following U.S. Patents, 5,613,483; 5,881,707; 5,967,133; 6,035,843 and 6,474,326.*

### **NEW BOOST™ BOLT TECHNOLOGY**

The patented spool valve bolt design has been enhanced for the NT by utilizing new patent pending Boost Forward Technology and an auto shutoff valve system. The linear, second stage solenoid spool minimizes dwell, allowing the NT to function with a minimum dwell of only 6 milliseconds. The spool valve Boost Bolt design, provides the ability to adjust shot chamber volume and airflow. This allows the NT to be modified so efficiently that recoil and sound signature can be easily tuned to the players exact specifications. The NT has a standard operating pressure of 130psi. Depending on your chosen bolt configuration, the NT will yield 1500 to 1700 shots from a standard 68ci, 4500psi tank.

**NEW PGA TECHNOLOGY** Introducing Dye's proprietary graphic anodizing technology. A first for the paintball industry, Dye has developed an advanced anodizing process that allows any graphic to be directly transferred to the surface of the gun. Additionally, Dye's PGA process ensures minimal graphic resolution loss or distortion, while maintaining ultimate clarity. The all new 2010 DYE NT comes in 4 spectacular limited edition anodized patterns. These graphics are unique in color and design to each gun and will be run in a limited number, so make sure you grab yours before they run out.

**2010 DM SERIES** The new 2010 DM Series continues the tradition of being one of the lightest, smallest, fastest and certainly the most accurate of paintball markers in the world. Our one-piece Fuse™ bolt system operates at 145psi with a shorter flow path, resulting in a shorter overall length. The low operating pressure provides smooth operating performance with minimal shot bounce and noise. The 2010 DM Series features a low-maintenance internal patent-pending Eye Pipe anti-chop sensing system that is self cleaning, providing trouble free high rates of fire. Durable and super-flexible detents offer supreme tenderness to the most brittle of paint. The Reach Trigger allows the trigger's reach and rake to be fully adjusted by the user for ultimate individual ergonomic comfort. Weighing in at 1.9lbs, the 2010 DM Series is lighter than it's predecessor the DM9. All of these innovations, coupled with new 3D body styling and standard features like the patent pending Ultralite frame, Ultralite Sticky3™ grip, two piece 14" Ultralite barrel, cam lock feed neck, and cast aluminum inset DYE logo, it's easy to see why the 2010 DM Series is "The Choice of Champions".

## **2010 DM SERIES FEATURES**

Available in 4 colors. Weight 1.9 lbs.

### **01 Ultralite Barrel**

The industry standard for accuracy, the 2010 DM Series comes stock with the Ultralite™ 14 inch barrel.

### **02 Fuse™ Bolt**

The removable one-piece Fuse™ bolt system operates at 145psi with a shorter flow path resulting in better efficiency. Large front and rear bumpers used in the Fuse™ bolt, offer greater reliability and smooth shooting.

### **03 Internal LPR**

The miniature modular internal LPR provides more efficient shot consistency. It allows the user to optimize efficiency and reduce kick.

### **04 Pro-Performance Detents**

Durable and super-flexible detents offer supreme tenderness to the most brittle of paint. Flex-spring geometry ensures that balls will not double feed into the breach.

### **05 No Eyeplates**

The 2010 DM Series features a low-maintenance internal patent-pending Eye Pipe anti-chop sensing system that is self cleaning, providing trouble free high rates of fire.

### **06 Ultralite**

Weighing in at 1.9 lbs., the 2010 DM Series is lighter than it's predecessor the DM9.

### **07 Color Coded O-Rings**

Makes it easier to perform regular, scheduled maintenance of your Fuse™ Bolt system.

### **08 Ultralite Reach Trigger**

Trigger roller bearing inserts give the trigger stability and a smooth swing return. The externally adjustable design allows you to limit the travel of the trigger and spring tension without removing the grip frame or Sticky3 grip. Trigger Reach Adjustment is a first in the paintball industry, which allows the user to fully customize the trigger for ultimate shooting capability.

### **09 UL Grip Frame**

The 2010 DM Series is the proud owner of the world's lightest, most compact and comfortable 45 grip frame available. The patent-pending hour-glass design allows for a sleeker profile, while heads-up display light alert you to the status of your gun, without having to take your eyes off the game.

## **10 LED Control**

High intensity LED provides identification to program functions. The 2010 DM Series features our unique heads-up display light which alerts you to the status of your gun, while still being able to focus on the game.

## **11 Metal Power Buttons**

Our metal/rubber button pad features large buttons that can easily be used while wearing gloves. Stainless steel buttons are guaranteed not to fail.

## **12 Hyper3™**

The Hyper3™ regulator sports a streamlined diameter with unmatched flow and consistency, while maintaining precise adjustments. The Hyper3™ also features an ergonomic Sticky Grip Sleeve providing a more comfortable, textured fore grip.

## **13 Cam Lock Feed Neck**

Low profile locking feed port with adjustable cam lock neck allows you to use your choice of hopper and secure it firmly to the 2010 DM Series without the use of tools.

## **14 Low Pressure**

The low 145 psi operating pressure provides smooth operating performance with minimal shot bounce and noise.

## **15 Ultralite Sticky3™**

Ultralite Sticky3™ grip is standard and provides an anatomically correct fit to your hand. It is co-molded with a tacky rubber grip and hard plastic under-frame. The Hyper3™ also features the same tacky rubber.

## **16 Legal Software**

Comes with multiple programming modes including PSP and Millennium tournament legal software.

*DYE Precision, Inc. U.S. Patent # 5,613,483. OTHER U.S. AND INTL. PATENTS PENDING.  
Covered by one or more of the following U.S. Patents, 5,613,483; 5,881,707; 5,967,133; 6,035,843 and 6,474,326.*

**2010 ROTOR** The DYE Rotor Loader is a radical innovation in loader technology. Culminating from years of research and collaboration between designers, engineers and professional paintball players, the Rotor Loader is now the number one ranking loader, taking top podium spots in tournament after tournament. The loader top shell can quickly be removed without any tools, for fast and quick maintenance or clean up, even while on the field. The breakdown of the Rotor Loader is so remarkably simple and efficient, it can be fully disassembled in under 30 seconds. Featuring an absolutely impressive 50+ balls per second feed rate, and 50,000+ ball shot count battery life, it's easy to see why the Rotor Loader has quickly become the number one choice in loader technology among top level teams and paintball players the world over.

## **ROTOR FEATURES**

### **01 REVOLUTIONARY PATENTED ROTOR™ TECHNOLOGY**

The ROTOR™ LOADER far exceeds pro level feed requirements with an impressive 50+ balls per second feed rate. The constant feed rotor carousel combined with the opposing rotation of the center rotor arm provides smooth, consistent, rapid and dependable feed performance shot after shot. This new technological design provides unmatched performance over any other loader on the market.

### **02 LOW PROFILE**

Designed with the professional player in mind, the unique center feed design of the Rotor™ pushes balls straight down over a short distance allowing the loader size and shape to be small and low profile.

### **03 200 BALL CAPACITY**

Play longer without reloading. The ROTOR™ holds up to 20% more paint than most loaders, while having the lowest profile. Additionally, the ROTOR™ is also one of the lightest 200 round loaders available. Simply smaller, lighter and faster.

### **04 SPRING LOADED FLOOR TRAY**

The Patent Pending revolutionary collapsing floor tray allows for maximum ball capacity, while ensuring consistent, reliable feeding down to the last ball. The spring floor tray also ensures ball feeding while shooting at elevated targets by raising the floor as you shoot.

### **05 NO TOOLS NEEDED**

The ROTOR™ can be effortlessly broken down for basic cleaning or maintenance with the push of a button. No tiny screws and nuts to loosen, parts to lose or break off. Just smart and simple engineering with the players needs in mind.

## **06 SEE THROUGH WINDOWS**

Provides you the ability to monitor your paint level visually so you don't get caught without paint.

## **07 INTERCHANGEABLE CARRIER WITH SPRING LID**

The transparent locking lid is integrated into an interchangeable dual density carrier. The spring tension lid allows fast loading and a secure lock on the loader. The carrier design allows you to quickly change between your lid or speed feed. Additionally, the removable upper shell allows you to use a high capacity upper that will hold 250 rounds (sold separately).

## **08 POSITIVE PUSH POWER BUTTON**

Single push Power On/Off button with LED display. The positive push button and bright LED informs you when your loader is on or off.

## **09 JAM RELEASE TRIGGER**

In the rare event of a ball jam caused by oversized or out of round paint, simply give the jam release trigger a quick pull and you are back in action.

## **10 50,000+ SHOT COUNT**

The ROTOR™ provides an impressive 50,000+ ball shot count on one set of three AA batteries. This new design of efficient power regulation is revolutionary and the first of its kind in loader technology.

*DYE Precision, Inc. U.S. Patent # 7,568,478, U.S. Design Patent # D597,152. OTHER U.S. AND INT'L PATENTS PENDING*

## **ROTOR COLOR KITS**

Custom color accessory kits for your Rotor to help give you that customized look.

## **ROTOR HI-CAPACITY TOP SHELL**

The new Hi-Capacity Rotor shell increases your ball capacity to 250 paintballs while maintaining a low profile.

## **ROTOR TOP SHELL WINDOWS**

Replacement windows for your Rotor Loader.

## **ROTOR QUICK FEED**

Quickfeed in the color you want.

## **QUICK FEED & VELOCITY ADAPTER**

This Quickfeed with Velocity adapter allows you to easily change out your stock Velocity lid with our new and improved Quick Feed system.

## **REPLACEMENT ROTOR LID**

Standard replacement lid for the Rotor Loader.

## **THE THROTTLE**

The pros are switching. Out with the crazy digi-tech-high-maintenance air systems. The in thing is presets. Our unique design of the Throttle Preset provides maximum unrestricted air flow at a constant output pressure, without all the hassles of fine tuning or changing a bad o-ring. Simply screw on the Throttle air system and you can be assured that you are playing with the most efficient, consistent and durable air system on the market. As with most preset systems, this regulated air system must be used in conjunction with a good in-line reg, such as our Hyper<sup>3™</sup> reg. Throttle tanks are available with either EU or DOT certification. Please specify when ordering.

## **HYPER<sup>3™</sup> REGULATOR**

The proven Hyper regulator design has been greatly improved. Now introducing the Hyper<sup>3™</sup> in-line regulator. This new design is sleeker, smaller, more consistent and offers more precise increments of adjustment. We've taken in-line regulators

to the next level. Our new shim stack is more responsive and reacts quicker to pressure changes allowing better flow and a faster response. This ultimately provides you with a regulator that is more easily adjustable. The size has been dramatically reduced allowing us to incorporate the soft rubber outer grip. This outer grip is developed from the same compounds used in our proven Sticky Grips, and will provide you with a secure surface for which to hold your marker. In addition, the Hyper3™ air input swivel ring allows it to work with all bottom line configurations

## **RHINO COVER**

Aside from your elbow or knee, your tank is usually the one thing that hits the ground the hardest. Taking care of your tank is just as important as your body. 4500 pounds of pressure is a serious thing. The rhino cover is a virtual barrier for your tank to help prevent scrapes and scuffs that could end up terminating the life of your high pressure air system. The wrap around direct injects and the injection molded scale section of the grip practically glue the tank to your shoulder. Another item where style meets function, direct inject logos ensure long lasting good looks. Because the bottom usually takes the most abuse, we've included high-density nylon coated padding with rubber abrasion print to help soften the blows

## **B-WING BOLT KIT**

Who else would you trust for aftermarket upgrade parts for your DM than Billy Wing? Billy is a 12 year Pro veteran, and one of the head designers of DYE's extensive gun line.

The B-Wing bolt kit is hand polished and fitted to ensure pro level performance. The mirror like finish allows for a lower LPR pressure, which renders less kick. The B-Wing bolt also helps prevent bolt stick, which improves shot to shot consistency. For DM7's you must use the DM7 Bolt Can, not the Bolt Can included in B-Wing Bolt Kit.

- Hand Polished Bolt
- Reduces Bolt Stick
- Improves Shot To Shot Consistency
- Operates With Lower LPR Pressure

*Fuse Bolt™ Patent: U.S. Patent #5,613,483. Other U.S. and International Patents Pending*

## **REACH TRIGGER**

- New Adjustments: Rake and Reach
- All Features Externally Adjustable
- Fits All DM Series and M5/M6/M7/M8 Series UL Frames
- Patent Pending

The Reach Trigger is the next evolutionary step in individually customized ergonomic comfort, not to mention optimal trigger speed. With the Reach Trigger it is possible to adjust the angle and reach of your trigger externally. The new angle adjustment combined with the many other UL trigger adjustments makes the Reach Trigger the most customizable trigger on the market today. Upgrade your DM series marker today and reach your ultimate shooting capabilities. The Reach Trigger fits all DM UL frames, M5-M8 UL frames, and the new SLG UL composite frame.

## **NEW IRONMEN BLADE TRIGGER**

- Designed exclusively by Ironmen players
- Forward curve design for faster trigger feathering
- New Adjustments: Rake and Reach
- All Features Externally Adjustable
- Fits All DM Series and M5/M6/M7/M8 Series UL Frames
- Patent Pending

## **EYE-PIPE** *(Patent Pending)*

- Fits DM8, DM9 and DM10 Markers
- Detents Secured to Eye Pipe
- Designed for Durability and Easy Maintenance

This self-contained detent system gives you long lasting reliability and peace of mind from double feeding. The new flex spring geometry holds paintballs securely in the breech without any unnecessary force that could threaten to affect your accuracy or break paint. Compatible with DM8, DM9 and DM10 markers.

## **NEW UL AIRPORT ON/OFF**

The new Dye airport features a front airline fitting and the new on/off is perfectly balanced for an easy twist.

## **NEW DYE MULTI-TOOL**

The DYE Multi-Tool contains a range of Allen keys: 1/4", 3/16", 5/32", 1/8", 3/32", 5/64", 1/16" and .05". Also featuring a small phillips screwdriver to remove the board, a hex key to tighten your macro-line fittings, a flathead-screwdriver/bottle opener, small pocket knife, a straight O-ring pick and a 90° O-ring pick. There are even a few tools on there for our future items. Whatever your fix-it needs are, the new DYE Multi-Tool will have you covered.

## **I4 GOGGLE SYSTEM**

The smallest, lightest, lowest profile and best field of vision available.

### **01 THE I4 RAPID LENS CHANGE SYSTEM**

The i4 has a revolutionary patent pending rapid lens changing system that allows you to change lenses in under 10 seconds. It is the quickest and easiest lens changing system in the sport today. The unique design of two tabs allows you to remove the current lens and replace or clean it with ease. Simply push on each interior tab arm, slide them forward and the lens is free to be removed. Insert the new lens and pull both tabs back to securely lock the lens in place. No separate parts to take off, no extra pieces in your hand.

### **02 290 DEGREES OF HORIZONTAL AND PERIPHERAL VISION**

The i4 offers more vertical and horizontal peripheral vision than any other mask system on the market today. Clear, unobstructed vision both up and down allows you to clearly see all of the field details without constantly moving your head. Movement is much easier to recognize and provides a clear visual advantage. This is also combined with our optically correct tirodial impact lens that provides perfect clarity and sharpness while protecting your eyes.

### **03 CO-MOLDED SOFT LOW PROFILE MASK**

Designed with the Professional in mind, the i4 goggle system provides you comfort, rigidity and lightweight protection with our one piece, dual injected mask. The comfortable, ergonomic, low profile mask not only allows you to sight closer to your marker, but also allows freedom of movement with its lightweight design. The small, compact, lightweight design of the i4 will almost allow you to forget you are even wearing a mask at all.

### **04 SOFT, LIGHTWEIGHT EAR PROTECTION**

The sleek, light, low profile soft compression ear pads provide the protection you need while offering style and hearing clarity. Ear protection is important and the i4 provides it while not being obstructive, bulky or heavy. Additionally, the i4 ear pieces are backed with a Cool Max® liner that wicks sweat away while providing comfort and keeping your ears cool.

### **05 COMFORTABLE ANATOMIC MASK FIT**

The anatomically correct i4 mask system offers the best in comfort for all facial contours. Designed with the ultimate comfort in mind, the i4 mask is the latest in anatomical facial fit and is supported by its lightweight construction. The i4 is also tested at twice the current impact ASTM standards. The i4 is built for comfort and built to last.

### **06 RETENTION STRAP**

The i4 retention strap system needs to be adjusted once and once only. This sure lock feature is made possible by the woven rubber that is in the strap material itself. Unlike silicone that eventually breaks down and peels off, the elasticity of our rubber straps will out last the competition. The i4 is designed to fit your head and stay that way.

### **07 EXTREME MULTI-DIRECTIONAL VENTING**

One of the i4's greatest features is the Multi-Directional Venting. Utilizing precise blade angling and a proven venting configuration, the i4 Multi-Directional Venting will make communication with your teammates effortless. This unique patented design drastically reduces re-ventilated fogging and will throw your voice farther and clearer than any other vented mask on the field.

### **20% LIGHTER THAN OTHER GOGGLE SYSTEMS**

Now, one of the lightest goggles on the market in professional paintball. The less your equipment weighs, the better you can perform and focus on the game. We've reduced the overall weight by 20%, giving you every possible edge.

### **UPGRADED WITH A THERMAL LENS**

The i4 comes equipped with a thermal lens, providing optimal lens clarity in any weather situation. The scratch resistant

coating protects both sides of the lens against scratches and minor abrasions. The thermal lens has a unique UV protective coating, offering you exceptional UV protection. In the sport of paintball, optimizing your vision to the targeted environment is critical; our lens helps you achieve that clarity.

## **I4 COLORS**

The i4 goggle system comes in a variety of colors to suit your style. Please note, some models come standard with a High Definition lens, while others come standard with a Smoke lens.

WHITE/GOLD	<i>High Definition Lens</i>
WHITE	<i>High Definition Lens</i>
WHITE CAMO	<i>Smoke Lens</i>
BLACK	<i>High Definition Lens</i>
GRAY LIQUID	<i>Smoke Lens</i>
RED	<i>High Definition Lens</i>
RED LIQUID	<i>Smoke Lens</i>
BLUE	<i>High Definition Lens</i>
TAN LIQUID	<i>Smoke Lens</i>
OLIVE CAMO	<i>High Definition Lens</i>
LEOPARD	<i>Smoke Lens</i>

## **THERMAL LENSES**

High quality and perfect optical clarity replacement lenses for the i4 goggle systems.

## **I4 REPLACEMENT MASK**

High quality replacement mask for the i4 Goggle System.

## **I4 REPLACEMENT STRAP**

High quality replacement goggle strap for the i4 Goggle System.

## **I4 REPLACEMENT EARPIECES**

High quality, soft and flexible earpieces for the i4 Goggle System.

## **PRO I3 SYSTEM**

**01** Tri-Mold Soft Flex Technology™ offers various mask flexibility without sacrificing safety or performance. Utilizing a revolutionary process of co-molding, our design team has developed a firm base frame coupled with a very flexible facemask and patented venting system.

**02** The Pro i3 retention strap system needs to be adjusted once and once only. That is because we use woven rubber in our straps. Unlike silicone that peels off easily, the elasticity of our woven rubber straps will outlast the competition. Designed to fit your head and stay that way, like it should.

**03** Ear protection is critical, but does not need to be bulky. The Pro i3 system features a foam molded earpiece that is soft, flexible and extremely light weight. This new earpiece helps to reduce the weight of the mask and cuts down the overall profile, creating a smaller target. Cool Max® material has also been added to help increase moisture evaporation.

**04** The anatomically correct Pro i3 mask system offers comfort and performance for the professional player. Tested at twice the current ASTM impact standards for safety. Good protection is key.

**05** The Pro i3's compound radius lens gives the player the ultimate in vertical/horizontal peripheral vision and optical clarity. Setting the standard in visual performance, the dual-bowl lens design offers phenomenal visual performance.

**06** The Pro i3 goggle frame is molded from tear-resistant polyurethane and is designed with maximum flow-through ventilation. Designed to be anatomically correct and low profile to your face, the Pro i3 goggle frame is a first in the paintball industry.

**07** Combined with a secure goggle, the patented Multi-Directional Venting drastically reduces re-ventilated fogging. The Multi-Direction Venting also assists you with voice projection on the field.

**08** Adjustable comfort chinstrap to secure goggle during active play.

## **UPGRADED WITH A HIGH DEFINITION LENS**

The Pro i3 comes equipped with our enhanced High Definition Lens, providing optimal lens clarity in any weather situation. The high contrast tint greatly increases your visual perception and helps with distinguishing various colors on the field. The scratch resistant coating protects both sides of the lens against scratches and minor abrasions. The High Definition Lens has a unique UV protective coating, offering you exceptional UV protection. In the sport of paintball, optimizing your vision to the targeted environment is critical; our lens helps you achieve that clarity.

## **EXTREME MULTI-DIRECTIONAL VENTING**

One of the Pro i3's greatest features is the Multi-Directional Venting. Utilizing precise blade angling and a proven venting configuration, the Pro i3 Multi-Directional Venting will make communication with your teammates effortless. This unique patented design drastically reduces re-ventilated fogging and will throw your voice farther and clearer than any other vented mask on the field.

## **SOFT FLEXIBLE EARPIECES**

We've developed soft, flexible, compression formed earpieces for the Pro i3. These earpieces are lighter and less obstructive, allowing you to hear more clearly and providing a soft surface to promote deflections from oncoming paintballs. Our new earpieces feature a Cool Max® liner to help keep you cool and wick sweat away. We offer a variety of colors and prints to match your personal style.

## **THERMAL LENSES**

High quality and perfect optical clarity replacement lenses for the Invision and i3 goggle systems.

## **INVISION GAME TIMER**

The patent pending Invision™ Game Timer is yet another example of DYE striving to be the most technologically advanced and stylistically innovative company in the industry. This simple device has added a whole new dimension to the game of paintball. Easily installed into any Invision™ system, the timer rests comfortably next to your right ear. The Invision™ Timer voice alert will beep and announce the time as it counts down: 60, 50, 40, 30, 20, 10, 5, 4, 3, 2, and 1 minute points and at the 50, 40, 30, 20, 10, 9, 8, 7, 6, 5, 4, 3, 2, and 1 second points. After the one second announcement, the timer will tell you "game over". Can be used during big games, tournaments or practice. The Invision™ Game Timer is an item you can count on. Fits Pro i3, i3 and original Invision.

## **INVISION TURBINE FAN**

Like a personal ventilation system for your Invision™, the Turbine Fan is a culmination of DYE's design efforts for perfect goggle circulation. The Turbine Fan features the Turbo 9 accelerator blade which yields higher air flow volume while operating at a lower RPM, resulting in quieter operation and extended battery life. Two speed operation ensures that you get the best results under any condition. High-impact plastic resists breakage from close range shots. Foggy lenses can be a thing of the past with the low profile Turbine Fan. Can be worn with or without a visor. Installs in seconds. Fits Pro i3, i3 and original Invision.

## **FRAMES**

Replacement frame for the Invision and i3 goggle systems. Replace worn or damaged frames.

## **PRO i3 MASK**

Replacement mask for the Pro i3 goggle system. Replace worn or damaged masks. Soft ear pieces included.

## **PRO i3 VISOR**

Replacement visor for the Invision and i3 goggle systems.

## **C10 JERSEY | *Kids, S-XXXL.***

The Dye C10 Jersey is our most advanced jersey to date. The jersey features thumb slots that prevent your sleeves from sliding up. The C10 Jersey is also constructed with a significant amount of vented material to keep you cool under fire while reducing weight. We've introduced compression formed, open cell foam shoulder pads, the first of its kind. These pads conform to the body, providing a more comfortable fit and better protection. The C10 jersey also features a re-designed comfort fit v-neck collar and of course patented DyeTack™.

## **01 DYETACK**

Patented DyeTack™ technology is a direct injection process that bonds to the material of the jersey. DyeTack™ is a durable polymer creating a friction point that stabilizes marker position. We invented DyeTack™ in 2002, since then we have perfected the level, position and density of DyeTack™ to ensure optimal tank stability. Everyone else has tried to imitate this patented process. If it's not DyeTack™, it's not real.

## **02 3D CONTOUR PADDING**

We have redefined the level of protection once again. Compression formed, open cell foam shoulder pads. These molded pads are contoured to the shape of the shoulders, and extend across the chest, maximizing coverage. These new pads are always in the proper position. No matter how you move, the pads move with you.

## **03 VENTING**

Paintball is a fast paced sport and venting is critical. Our open port mesh venting helps to channel heat away from the body. It works with your body's natural cooling system, pushing heat out to the sides and under arms, and keeping the area around your chest cool. The C10 has significantly more venting than the C9. It's featured in the entire sleeve, lower back, outside torso, and shoulder segments. This results in exceptional airflow combined with light weight breathability, delivering a jersey that is true performance.

## **04 GLOVE CUFFS**

The cuffs on the C10 Jersey have been designed to provide greater flexibility to the wrist and hand, offering freedom of rotation. The unique underside of the cuff design extends to the center of the hand, providing protection to the base of your palm. The thumb-hole in the cuff secures the sleeve in place with or without gloves.

## **05 COMFORT V-NECK COLLAR**

The lightweight v-neck collar features an anatomical correct fit while providing pure comfort. The C10 v-neck is designed with a light-weight stretch nylon construction. The contoured panel assembly ensures that the jersey moves with you. The collar is secured with reinforced stitching, and the neckline is double layered for added comfort.

**06 NO FADE SUBLIMATION** Our graphics are sublimated for a no fade style. This process ensures that the graphics stay crisp and clean.

## **07 PADDED ELBOWS**

The protective material used for the elbow padding is lighter in weight, resulting in more flexibility and an overall reduced weight of the jersey. The pads begin at the wrist and extend well past the elbows, providing ultimate arm protection. Today's game is more intense than ever, requiring fast moves and aggressive slides. By reducing injuries, you can stay more focused on winning.

## **C10 KIDS**

Paintball is an excellent sport for today's youth. It builds character, pride and self confidence. The game helps with developing team skills, hand-eye coordination, and is a great source of exercise. But kids traditionally don't fit in adult gear. That's why we've developed a line in kids sizing. Our new youth size offers the same quality and protection you have come to expect from Dye, just in a smaller package. Now your kids can look and play like the pros they look up to. Fits waist sizes up to 26".

## **CUSTOM LETTERING**

The paintball world is comprised of individuals. Why not make a name for yourself with custom lettering. From names and numbers to large logos, our graphics department can take care of it. You can send your team's artwork in a vector format EPS file on CD or e-mail it to [jersey@dyeprecision.com](mailto:jersey@dyeprecision.com)

## **NEW POLAR WINTER JERSEY | *M/L, XL/XXL***

All new for 2010, the Polar Winter Jersey. Designed to keep you just warm enough while playing in cold to snowy conditions. Let's face it, some of us get that urge to play during the off season, even in the snow. For all of you in cold weather climates, we've designed a jersey specifically for you. Featuring padded shoulders and elbows, front zip pockets, and zippered venting slits under the arms.

**01 PADDED NECK** A lightly padded neck offers extra protection on the throat area while playing.

**02 ZIPPERED VENTS** Zippered side vents allow you to increase your ventilation when needed.

**03 GLOVE STYLE WRIST GAITOR** Glove style wrist gaitors offer an extra level of warmth for your hands and also helps to keep the sleeves from riding up.

**04 FLEECE LINED** The unique, fleece lined jersey material helps to keep you warm, without over heating. Perfect for those cold weather games.

## **C10 PANT** | *Kids, XS-XXL.*

The C10 Pant is the ultimate collaboration between pro athletes, product developers, material experts and designers. Featuring a harness-stabilizing back yoke, and two new micro mesh inseam materials that provide you venting and a complete range of motion in all directions. The increased venting of the C10 Pant helps make it lighter and more comfortable. Softer, 3D contoured padding on the hips and back yoke enhance protection while improving mobility. Ballistic heavy duty nylon panels with responsive air-foam padding on hips and knees now give you the ultimate in sliding protection. All this culminates in a pant engineered to perfection.

### **01 HEAVY DUTY BALLISTIC KNEES**

We have continued to use the proven ballistic nylon and integrated it with flex panels around the knees to help withstand the most aggressive abuse. The C10 has an improved padded knee design that wraps around the entire knee, with additional front shin, outer shin and inseam padding. This design, combined with flex-panels keep up with your speed and motion without being stiff, while quilted sections of responsive air-foam add protection. This reduces the wear not only on your pants, but your joints as well.

### **02 FLEX KNEES**

The key to playing good paintball is speed, movement and protection. This is the fundamental concept with our continued refinement of our knee design. The C10 provides a maximum range of motion without being stiff, and the multi panel flexible knee design offers improved durability with movement.

### **03 ADJUSTABLE WAIST**

Our adjustable waist not only allows you to change the fit of your pant, but the internal elastic belt also acts as a small, comfortable kidney belt.

### **04 VENTING**

The inseam features two different vented mesh materials. Whether you are crouching, crawling, kneeling or sliding, the C10 pant breathes with you. Venting also surrounds the back yoke and padded zipper fly, extending all the way down to the knee for increased circulation.

### **05 DOUBLE AND TRIPLE STITCHING**

For a pant to be durable, it needs good stitching. The seams of the C10 are double and sometimes triple stitched for durability. It's a quality feature that adds pant longevity, so you can get a full season of use and then some.

### **06 PADDED AND VENTED CROTCH**

Nothing is quite as essential as a padded crotch protector. We were the first to introduce this feature to the industry years ago, and now we've made it better by utilizing responsive air-foam. Increased ventilation offers even more cooling comfort.

### **07 SWAB POCKET**

Holds standard flex swabs or stick swabs.

### **08 ADJUSTABLE CUFFS**

For those of you who like a tight cuff, the adjustable ankle cuffs allow the perfect fit for any type of cleat.

### **09 VENTED NYLON**

The entire back of the leg, from the knee joint down, is vented nylon. This large of an area can provide more circulation than your car's air conditioner. Well, almost.

### **10 REINFORCED SADDLE SEAT**

Sliding can be hard on your pants. We know this from experience and that's why we've reinforced the seat with extra nylon material.

### **11 HYPER-FLEX YOKE**

The back yoke is a crucial part of your pant. It has to move, it has to protect, and it has to keep your harness in place. Harness-stabilizing direct injection keeps your pack where you need it to be. Featuring a Hyper-Flex outer section and stretch under layer for increased movement. This dual-layer with pass through venting keeps your back side cool,

preventing sweat build up and harness twist.

## **12 3D CONTOUR PADDING**

Dye's unique design uses compression formed foam to provide extra side protection for your hip bones and thighs while diving or sliding.

## **NEW META GLOVE** | S/M, L/XL.

One thing we do is listen to our professional players. The pros wanted a glove that wasn't a glove. They wanted all the protection of a glove, without the interference of having their fingers covered. By having your fingers covered, you actually lose agility and speed when rolling the trigger. Our new Meta Glove combines the best of both worlds. A lightweight, unhindered fingerless glove design that offers protection on the back of the hand and palm, and features a supportive wrist closure. The Meta Glove is like a second skin, so comfortable that you will almost forget you're wearing it at all.

### **1 - FINGERLESS DESIGN**

The design of the fingerless glove was developed to be snug, comfortable, light, and most of all, unrestrictive. It gives your fingers the freedom they need, while protecting your hand and wrist.

### **2 - COMPRESSION FORMED EVA FOAM**

The back of the hand is designed with compression formed EVA foam, at a height of 5mm. This foam offers padded protection for the back of your hand.

### **3 - DIRECT INJECT LOGO**

Direct inject DYE logo, so you can represent.

### **4 - MICRO INJECTION PULL TAB**

Heavy duty micro injection pull tab.

### **5 - REINFORCED PALM**

The palm is made with a heavy duty, scuff resistant material. This material helps protect your palm during slides. The seams are reinforced with interlock stitching.

### **6 - NEW EXTENDED SILICONE PRINT**

A portion of the palm features a silicone pad print, we've extended this area for extra grip while holding your marker.

### **7 - HOOK AND LOOP WRIST SUPPORT**

2 inch wide hook and loop closure for the wrist provides extra support, while keeping debris out of the glove.

## **ASSAULT HARNESS** | #63 | Black/Gray Only | 3 + 4 or 4 + 5

The Assault Pack is a perfect example of the collaboration between designers and athletes. Our design team meticulously picked apart every harness available. We sat down with our professional players and picked their brains on the most elite pack they could think of. Then we let our design team do their thing. The first item of concern has always been reducing the weight. We were able to accomplish this by utilizing new materials in different configurations and reducing the overall weight by 5 oz.! Supportive waist belt, sturdy construction, easy access to pods were some of the other areas of concern that we were able to improve upon. Check out the details for all of the highlights.

## **EXTERIOR FEATURES**

### **01 55 MPH VELCRO**

Velcro so strong it will hold up in 55mph winds, or 55mph worth of pressure tugging on it when you dive or slide. It all makes sense now. We wanted to make sure the harness stays where it is supposed to be, during the whole game.

### **02 COMPRESSION FORMED VELCRO LOCK**

This is the last stage of the Velcro system. This goes on top, because it's on the top we wanted it to look cool. So we added a logo and some neat compression.

### **03 QUICK RELEASE HANDLES**

Compression formed pod straps are lighter. They have also been set to the perfect length, eliminating excess material.

### **04 CUPPED NEOPRENE EJECTOR LOOPS**

This is the area that stretches around the actual pods. Instead of depending on elastic straps to keep your pods in place, we have developed a specific pattern of compression neoprene that actually wraps around the pod itself, and causes a downward tension. This design keeps the pods securely in place, while being able to forcefully eject the pods from the loops whenever you're ready to pull that quick release. Direct inject is also featured to make it look good. As we discussed before, style is key.

## **05 DIRECT INJECT LOGOS**

Another touch of the DYE style to help keep you classy.

## **06 STAY OPEN POD LOOPS**

We've introduced a plastic frame at the base of each pod loop. The new frame forces the loop to keep its open shape at all times, providing optimal ejection capabilities. The insert frame keeps the pods centered, while loading the harness and while ejecting pods. A centered pod ejects smoother. It's all part of the development process to bring you the best performance possible.

## **07 VENTING**

In an effort to use the most reliable materials at the lightest weight, we incorporated a vented foam back pad. All other material has been chosen based off its lightweight and breathable characteristics.

## **08 MEMORY ELASTIC**

The memory elastic offers the most comfortable fit available. It also retains its original shape longer. That's why its called "memory" elastic.

## **09 SECONDARY POD WRAPS**

With today's games having multiple formats, you need a versatile harness. The Assault Harness has been designed to be used in Race-To style games as well as larger format games. To accommodate this, we have included secondary pod wraps between each pod loop, and on the outsides of the pod loops. This allows you to carry 3 pods up to 9 pods.

# **ASSAULT HARNESS (CONTINUED) | #63 | Black/Gray Only | 3 + 4 or 4 + 5**

## **INTERIOR FEATURES**

### **01 55 MPH VELCRO**

Velcro so strong it will hold up in 55mph winds, or 55mph worth of pressure tugging on it when you dive or slide. It all makes sense now. We wanted to make sure the harness stays where it is supposed to be during the whole game.

### **02 NEOPRENE COMFORT BELT**

The first belt that goes across your waist carries the most pressure. Some of you may notice this when you get that annoying "harness rub". Well it annoyed us too. That's why we added a neoprene padded belt. This is the first move into a more comfortable lightweight harness system. The more comfortable you are while playing, the more you can focus on the game.

### **03 COMPRESSION MOLDED HIP PADDING**

One of the main complaints from some of our top athletes is that the combination of the harness and pant buckle hindered their movement in the hip region. This is why we developed the compression molded hip padding. Not only is this pad light and sturdy, but it is attached to the inner belt. As you stretch the main belt to fit your preference, the hip pads slide along and fall into place on top of your hip bones. The secondary strap will cover this section, stabilizing the pads to ensure they stay in the spot needed most, over your hip bones.

### **04 MEMORY ELASTIC**

The memory elastic offers the most comfortable fit available. It also retains its original shape longer. That's why it's called "memory" elastic.

### **05 PLUSH COMPRESSION BACK PANEL**

As you can see, the back panel features many geometric shapes specifically designed to channel air away from the pressure point. Not only will this help keep this area cool, but this will aid in keeping this section dry so that the Rubber Traction Print can achieve its maximum effectiveness.

### **06 MID LEVEL VENTING**

We have integrated a vented sandwich made of an airy foam material. This material is at the core of the harness where the most amount of circulation and heat dissipation is critical.

### **07 RUBBER TRACTION**

A large section of rubber traction helps to keep your harness in place. It grips your pants and jersey, keeping a tight hold.

## **08 CENTER STRETCH**

The center point of assembly for the harness is directly over the spine. So when the belts are stretched around to fit, they are actually pulling from the center of your back. This assembly style ensures that you are getting the most comfortable and efficient use out of the harness system. Other harnesses tend to pull from the sides, not offering a true wrap around harness. It's not so much something you see, but something you feel. And to us, that little difference could aid in making a game winning move.

## **ATTACK PACK PRO HARNESS | #6400 | Red, Olive Camo, Gray | One Size Fits All.**

### **EXTERIOR FEATURES**

#### **01 55 MPH VELCRO**

Velcro so strong it will hold up in 55mph winds, or 55mph worth of pressure tugging on it when you dive or slide. It all makes sense now. We've added a compression form design to the ends, just to make it look better.

#### **02 COMPRESSION FORMED VELCRO LOCK**

This is the last stage of the Velcro system. This goes on top, we wanted it to look cool. So, we added a logo and some neat compression.

#### **03 QUICK RELEASE HANDLES**

Compression formed pod straps are lighter. We actually made them curved as well so they match the actual curve of the pod. This gives the strap a tighter fit to the pod, meaning a lower profile. On the other end, way up inside the pack, is ballistic stretch nylon. This stuff pulls the unused straps back into the pack, eliminating the dangling strap effect.

#### **04 DIRECT INJECT NEOPRENE COMPRESSION**

This is the area that stretches around pods 4-11. It conforms to the pods, giving you the tightest fit, from 4 pods to 11 pods. Direct inject is also featured to make it look good.

#### **05 DIRECT INJECT LOGOS**

Another touch of the DYE style to help keep you classy.

#### **06 CUPPED EJECTOR POD LOOPS**

The cupped shape keeps the elastic centered on the pods. A centered pod ejects smoother. It's all part of the development process to bring you the best performance possible.

#### **07 VENTING**

We've already established the more venting the better. Not only does the venting help circulate air around your pods, it also allows the air against your back to circulate as well. Check the next page, you'll see why.

#### **08 WOVEN VENTED-FIBER MEMORY ELASTIC**

The new vented-fiber memory elastic offers the most comfortable fit with air circulation available. It also retains its original shape longer. That's why it's called "memory" elastic.

#### **09 COMPRESSION FORMED VENTED SIDE PANELS**

The compression sides give the harness it's shape. This area flexes around the group of pods and helps keep them tightly in the center of your back. Without the vented side panels, you would have hot, floppy pods strapped to your back.

#### **10 DOUBLE LAYER VENTED OUTER BELT**

The double layer of vented-fiber memory elastic gives you a secure fit. From 1 pod to 11 pods, you'll have a snug fit every time.

The Attack Pack Pro is a perfect example of progression with design. It's light, flexible, vented and comfortable. Moreover it compresses in size with each pod you remove resulting in a perfect combination of versatility and compact size. The Attack Pack Pro can hold a range of pods, from 4 all the way up to 11. Depending on how many you use, the harness conforms to what is needed. Continuously self-adjusting to help maintain the lowest profile. The belt system is now made of woven vented-fiber memory elastic. It retracts neatly into the harness, again helping to maintain the lowest profile possible. The complete list of features is quite extensive. We couldn't help it. We had to describe the most important highlights we thought you'd want to know about.

## **ATTACK PACK PRO HARNESS (CONTINUED) | #6400 | Red, Olive Camo, Gray |**

*One Size Fits All.*

The Attack Pack Pro was specifically engineered to work with a range of pods. With the variety of today's games, from Xball™ to 5 man, 7 man, and even 10 man, the amount of pods needed is ever-changing. Why have 4 different harnesses when you really only need one? The Attack Pack Pro eliminates large, excessive harnesses by compressing with each pod removed. This allows you to maintain the lowest profile possible, helping to keep you in the game longer.

## **INTERIOR FEATURES**

### **01 WOVEN VENTED-FIBER MEMORY ELASTIC**

An inside view of memory elastic. Using this on all belt layers allows air to pass through.

### **02 PLUSH VENTED BACK PANEL**

As you can see, the vented slots provide maximum ventilation, all the way through the pack. Helping to cool you and your pods. The plush pillow-soft back panel makes this pack a joy to wear.

### **03 TOP LEVEL VENTING**

More venting over the pods means cooler pods. The cooler your pods, the less your paint will deform under heat.

### **04 RUBBER TRACTION PRINT**

Two sections of rubber traction help to keep your harness in place. It grips your pants and jersey, keeping a tight hold.

### **05 CUPPED EJECTOR LOOPS**

The cupped ejector pod loops help you get your pods fast.

### **06 BACK PANEL STRETCH GUSSETS**

They are known as "gussets" in the design world. They allow the pack to flex in another direction. So when you bend, crouch, crawl and duck, the surface of the harness will stay against your body. Again, helping to keep a low profile.

### **07 INTERNAL COMFORT BELT**

The first belt that goes across your waist carries the most pressure. Some of you may notice this when you get that annoying "harness rub". Well it annoyed us too. That's why we added a plush padded section. The more comfortable you are while playing, the more you can focus on the game.

## **NEW BALANCE TOP**

The Dye Balance top is designed with moisture wicking fabric to help maintain body temperature during aggressive play. Integrated Coolmax® material gives you the ultimate in climate comfort. Designed to help wick sweat away from your body, Balance keeps you cool, dry and focused.

## **NEW PERFORMANCE NECK PROTECTOR**

The new Dye Performance Neck Protector is a revolution in neck protection technology. This neck protector is unlike any other. We've specifically constructed the most critical areas utilizing plush, ventilated padding. The inside material that is against your neck is made of the softest, most breathable material available. The ultimate in comfort and protection for your neck.

ONE SIZE FITS ALL

## **NEW PERFORMANCE TOP**

The new Dye Performance Top is designed with compression formed responsive air foam for maximum protection. We have used this new compression formed padding in critical areas to offer the protection you need without hindering performance or range of motion. Moisture wicking fabric is positioned in areas to help maintain body temperature during aggressive play. Additional features include side vented gussets and upper chest mesh combined with Coolmax® to give you the ultimate in climate comfort.

## **NEW PERFORMANCE SLIDE SHORTS**

The new Dye Performance Slide Shorts have been designed with the same compression formed responsive air foam as the Performance Top. This unique padding material offers the ultimate in protection and breathability. We have positioned this

new compression formed padding in critical areas to maximize protection, without hindering movement or flexibility. Special hip bone pads have been added to help minimize injuries. A unique padded crotch protector has also been added to protect the most important parts. True elastic waist band allows full stretch evenly around the waist for ultimate comfort.

## **NEW PERFORMANCE KNEE PADS** | *S-XXL*

BLACK | #731400

### **01 LIGHTWEIGHT AIRPRENE BODY**

The lightweight airprene body provides a comfortable fit with ample circulation and ventilation. The back section of the knee pad has also been opened up to allow more venting, flexibility and a more comfortable fit.

### **02 DYE MICRO INJECTION LOGOS**

Micro injection logos complete the design in typical DYE fashion.

### **03 NEW ADJUSTABLE STRAP**

The new adjustable lower leg strap allows you to tighten the knee pad to your liking and helps to prevent the pad from sliding down.

### **04 EVA HIGH DENSITY FOAM KNEE PADDING**

This EVA high density foam knee wraps around your knee for a more custom fit and offers more cushioning for direct impacts.

### **05 OPEN-CELL FOAM**

High impact open-cell foam is extremely impact resistant and offers you a very high level of protection.

### **06 NEW SIDE PADDING**

Padding has been specifically added to the sides of the knee pads. These individual pads help when sliding or crawling at different angles.

## **PERFORMANCE ELBOW PADS** | *S-XXL* BLACK | #731000

### **01 LIGHTWEIGHT AIRPRENE BODY**

The lightweight airprene body is pre-shaped to conform to the natural bend of the elbow allowing the pad to provide ultimate comfort and flexibility.

### **02 DYE MICRO INJECTION LOGOS**

Micro injection logos complete the design in typical DYE fashion.

### **03 CUP-SHAPED EVA FOAM ELBOW PAD**

The cup-shaped elbow pad wraps around your elbow for a more custom fit. This goes beyond the pre-shaped fit of the airprene section. The cup-shaped design was developed to provide you with the most comfortable fit possible.

### **04 HOLLOWED EVA FOREARM PADDING**

This style of foam wraps all the way around, covering the inner arm and providing more protection. The hollowed chambers of this foam allow more air circulation around the forearm by keeping areas of the pad away from the skin, giving the pad a lighter feel.

### **05 NEW VENT PORTS**

The vent ports and 4-way stretch air-mesh offer optimal air flow to your forearms in conjunction with the hollowed EVA foam for the maximum amount of air circulation of any elbow pad available.

### **06 GEL INSERTS**

The gel inserts are highly impact resistant and help absorb brute force created from intense slides and dives.

### **07 ADJUSTABLE STRAP**

The adjustable strap allows you to tighten the elbow pad to your liking and helps keep the pad in place.

### **08 INTEGRATED SLIDER GLOVE**

The integrated Slider Glove acts as a glove without the extra hindrance of covering your fingers. This comfortable

design provides reinforced palm protection to help against abrasive slides, while the back of the Slider Glove features neoprene compression for added protection to the back of the hand. The placement of the Slider Glove helps to prevent the elbow pad from sliding up your arm and offers unrestricted movement allowing you to have maximum control and feel of your marker.

## **09 ELASTIC FINGER LOOP**

The elastic finger loop is an optional way to secure the Slider Glove, keeping the pad in place, but without interfering with finger movement.

## **NAVIGATOR GEAR BAG | 9313**

BLACK ONLY

*Dimensions L38"x W19"x H21"*

- Largest compartmentalized paintball gear bag available
- Upper completely detaches from lower
- Upper converts to backpack for dual usage
- Both upper and lower sections feature wheels for easy transport
- Padded gun section holds up to 3 markers, 1 with tank
- Redesigned large side pockets for extra storage
- Large rear compartment for storage
- Large front compartment for goggles and extras
- Multiple carrying handles
- Padded backpack straps
- Waterproof section for cleats
- Vented with durable metal eyelets
- Heavy duty ballistic nylon construction
- Backpack waist clip for extra support
- Large heavy duty YKK zippers with zipper pulls
- Extremely large lower section for clothing storage
- Embroidered DYE logos
- Dual Name card holder

The Navigator is the original paintball gear bag that completely separates into two halves. This unique design allows you to separate your dirty field gear from your clean street clothing. Fill the top section with all your guns, goggles, jerseys, pants, you name it. Then keep all of your clean clothes in the bottom section, allowing you to go out to the celebration dinners in style. The top section of the Navigator converts to a backpack with padded straps and back support, while the bottom section can be left at the hotel with all of your clean clothes for the night life. Both top and bottom sections now feature wheels for easy transport.

The Navigator can hold up to three guns, one of them still with the tank on it. You can also store your goggles without the worry of deforming them while it is left in the trunk.

## **EXPLORER GEAR BAG | 9312**

BLACK ONLY

*Dimensions L24"x W15"x H16"*

- Rolling travel bag

- Book style opening
- Telescopic handle and heavy duty wheels for easy transport
- Two book-style padded gun pages
- Two main compartments for gear
- Accordion style expandability for overpacking
- Four carry handles
- Large front compartment for storage
- Built in barrel compartment and bottle sleeve
- Large heavy duty YKK zippers with zipper pulls
- Sectioned interior
- Heavy duty ballistic nylon construction
- Embroidered DYE logos
- Cinch straps and buckle closures

The Explorer is the perfect paintball gear bag specifically designed for travel. Small enough to fit on an airplane. Vented bottom section allows you to store your gear, while the top section is closed off for your leisure wear. Two padded gun sleeves let you roll with both your favorite markers. Telescopic handle makes it easy to navigate through the busiest of airports, while multiple carry handles make it a breeze to pick up and go.
